

About us:

The Public Infrastructure Project Development Division of the Project Management Division at the Riga City Council's City Development Department.

Scope of work - Our division specializes in the development and implementation of public space infrastructure projects in the city. This includes project feasibility studies, hosting architectural design competitions, design development for complex projects, and coordination of their implementation during the construction phase. In this context, complex projects refer to initiatives involving multiple sectors (and departments within the city), such as transport infrastructure, parks, squares, plazas, and waterfront/embankment areas.

Expertise of the team within the division - Our team consists of project managers and experts in transport infrastructure planning, urban development, landscape architecture, and architecture.

Interest in Knowledge Exchange:

We are particularly interested in the development of public spaces, their relevant infrastructure, and waterfront/embankment areas in the historic city center. Our focus is on transforming transport-dominated spaces and integrating them within the historic urban fabric to create accessible and modern public spaces while preserving the city's historical heritage.

Example of Relevant Interest:

The proposed development project for the Embankment in Riga's historic city center (11. novembra krastmala).
